

Introducing 757 Express

Better Reliability

A reliable network that supports regional connectivity.

Faster Commutes

15-minute service during peak times.

New Connections

Expanded service to reach more people.

Regional success requires a well-performing transportation system – including public transit.

Transit plays an integral role in supporting the viability of the economy by creating ladders of opportunity and helping people get to school, doctor’s appointments, and employment. In 2020, the Virginia General Assembly recognized the vital role of transit by passing legislation establishing a dedicated funding stream for public transportation in Hampton Roads. These funds support the new regional transit system – the “757 Express” - increasing access to safe, reliable, and affordable public transportation options throughout Hampton Roads.

The “757 Express” supports increased frequency service for 13 regional bus routes, as well as express and commuter routes, to serve as the regional backbone for HRT’s transit network. This regional transit system will provide increased access to and from jobs and workforce development centers increasing sustainable employment options and economic opportunities for citizens throughout Hampton Roads. With a changing marketplace, the new dedicated funding sources will enable Hampton Roads Transit to respond and pivot as required as the demands of transit customers evolve.

Regional Backbone Impacts (15-min weekday peak service)		
	Current HRT System	13-route Regional Backbone
No. of Routes with 15-min Weekday Peak Service	6	13
Population Served	181,000	487,000 169% increase
